Android Build Targets

CONTENTS

- 1 Broadcom Proprietary and Confidential
- 2 Android Build Targets
 - 2.1 AVKO (7252S)
 - 2.2 BANFF (7251S)
 - 2.3 CYPRESS (7271)
 - 2.4 DAWSON (7268)
 - 2.5 ELFIN (72604)
 - 2.6 FUNDY (7278)

This document describes the available build targets, and a brief description of each. The following table describes the Google reference design, and the chipset that is based on.

Google Device	Chipset	Broadcom Reference Board Hardware
avko	7252S	BCM7252SFFG, BCM7252SSFFDR4*
banff	7251S	BCM7251SSFFDR4
cypress	7271 (B0)	BCM7271T
dawson	7268 (B0)	BCM7268USFF4AL
elfin	72604 (A0)	BCM72604USFF
fundy	7278 (Bx)	BCM7278IPA

* requires using "avkodr4" device profile

AVKO (7252S)

Target	RTS Box Mode*	Full Treble Support	A B Update Support	Description
avko	5	No	No	Official reference target for "avko".
avko_nvi	5	No	No	'nvi', also known as non-vendor-image, is identical to 'avko', except that there is no vendor partition, and the vendor directory is a part of the system image. This target is intended for customers that upgraded from older Android release (e.g. N-MR1) that prefer to keep the gpt intact.
avkodr4	5	No	No	DDR4 variant of "avko", requires 7252SFFDR4 hardware.
aosp_avko	5	No	No	'aosp' variant required by Google. This build does not include launcher, so Android would stay on boot animation after boot.

BANFF (7251S)

Target	RTS Box Mode*	Full Treble Support	A B Update Support	Description
banff	1	No	No	Official reference target for "banff".
banff_nvi	1	No	No	'nvi', also known as non-vendor-image, is identical to 'banff', except that there is no vendor partition, and the vendor directory is a part of the system image. This target is intended for customers that upgraded from older Android release (e.g. N-MR1) that prefer to keep the gpt intact.
aosp_banff	1	No	No	'aosp' variant required by Google. This build does not include launcher, so Android would stay on boot animation after boot.

CYPRESS (7271)

Target	RTS Box Mode*	Full Treble Support	A B Update Support	Description
cypress	5	Yes	Yes	Official reference target for "cypress".
cypress_nvi	5	No	No	'nvi', also known as non-vendor-image, is identical to 'cypress', except that there is no vendor partition, and the vendor directory is

				a part of the system image. This target is intended for customers that upgraded from older Android release (e.g. N-MR1) that prefer to keep the gpt intact.
cypressd	6	Yes	Yes	Multi decode and MS12 support
aosp_cypress	5	No	No	'aosp' variant required by Google. This build does not include launcher, so Android would stay on boot animation after boot.

DAWSON (7268)

Target	RTS Box Mode*	Full Treble Support	A B Update Support	Description
dawson	5	Yes	Yes	Official reference target for "dawson".
dawson_nvi	5	No	No	'nvi', also known as non-vendor-image, is Identical to 'dawson', except that there is no vendor partition, and the vendor directory is a part of the system image. This target is intended for customers that upgraded from older Android release (e.g. N-MR1) that prefer to keep the gpt intact.
dawson64	5	Yes	Yes	Experimental for 64-bit support. Do not use.
dawsonk64	5	Yes	Yes	Experimental: kernel 64-bit, android 32-bit support. Do not use.
aosp_dawson	5	No	No	'aosp' variant required by Google. This build does not include launcher, so Android would stay on boot animation after boot.

ELFIN (72604)

Target	RTS Box Mode*	Full Treble Support	A B Update Support	Description
elfin	5	Yes	Yes	Official reference target for "elfin".
elfin_nvi	5	No	No	'nvi', also known as non-vendor-image, is Identical to 'elfin', except that there is no vendor partition, and the vendor directory is a part of the system image. This target is intended for customers that upgraded from older Android release (e.g. N-MR1) that prefer to keep the gpt intact.
elfin_ms12d	5	Yes	Yes	Experimental. MS12 config D support.

elfin_mini	5	Yes	Yes	Experimental / do not use. 1.5GB memory. 4k max decode / 1080p graphics. Requires a custom bootloader.
elfin_hd	5	Yes	Yes	Experimental / do not use. 1GB memory. 1080p60 max decode / 720p graphics. Requires a custom bootloader.
elfin_fhd	5	Yes	Yes	Experimental / do not use. 1GB memory. 1080p60 max decode / 1080p graphics. Requires a custom bootloader.
elfink64	5	Yes	Yes	Experimental: kernel 64-bit, android 32-bit support. Do not use.
aosp_elfin	5	No	No	'aosp' variant required by Google. This build does not include launcher, so Android would stay on boot animation after boot.

FUNDY (7278)

Target	RTS Box Mode*	Full Treble Support	A B Update Support	Description
fundy	2	Yes	Yes	Official reference target for "fundy".

*: RTS box mode is defaulted to 0 in bolt, which may or may not be equal to the value listed here. However, the RTS box mode value will get override to export `B_REFSW_BOXMODE` with the listed value on Linux during boot. Please see `init.rts.rc`.
